

Introducing the New Austin Friars App

Welcome to the new Austin Friars App 3.0

The New App includes lots of new features to help you find the information you need.

New Navigation: An innovative new Left menu allows you to access the home menu where ever your are in the App. Click on the the menu icon in the top left of the screen.

Updating: We have made it easier to update the App. The App will now update automatically when you enter, if you are in an area with a poor signal or you just want to skip this step and get straight to the App content, you can press the X in the top right hand corner.

We have also made it easier to get updates from inside the App, now you can pull down to update the App from any list view.

Seeing what's new: We have made it easier to see what is new in the App. When new items are added to the App, you will see a ! next to the menu item, the category and the item itself. These alerts are removed when you change screens.

Categories: We have added a right menu for you to filter by category, simply click on the cog icon and select your category, the App will remember you setting for next time.

Filter Settings: We have added a Settings functions to enable you to select the News Feeds you want to see and select which type of updates and notifications you would like to receive.

Search: We have made finding information easier by adding a search function to Features, Calendar, Contacts & Services. Click on the magnifying glass icon to access the search bar.

Calendar: We have redesigned the calendar function to make selecting a date and scrolling a list of events far easier.

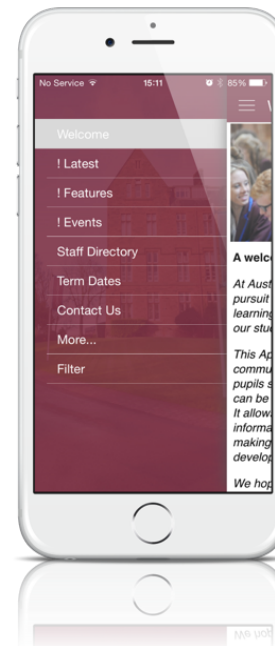

In addition: We have made changes to the App to make downloading faster and ensuring the App is optimised for the latest operating systems.

Thank you: These improvements have been made from the feedback you have given us over the last year, please keep the feedback coming so we can keep innovating to make the system the best it can be.
